Martin Russell

Unit 1

Lesson 2-5

1. Query for most expensive listing ($13000 per night)

```
select
     *
from
     listings
where
     price > 1000
order by price desc
```

2. What neighborhoods seem to be the most popular?

```
select
          *
from
          listings
where
          number_of_reviews > 200
order by
          number_of_reviews desc
```

3. What time of year is the cheapest time to go to your city? What about the busiest?
For this question, from the data in the files, I don't see how to get this information.

```
select
          *
from
          calendar
where
          field3 = 't'
order by
          cost desc
```
